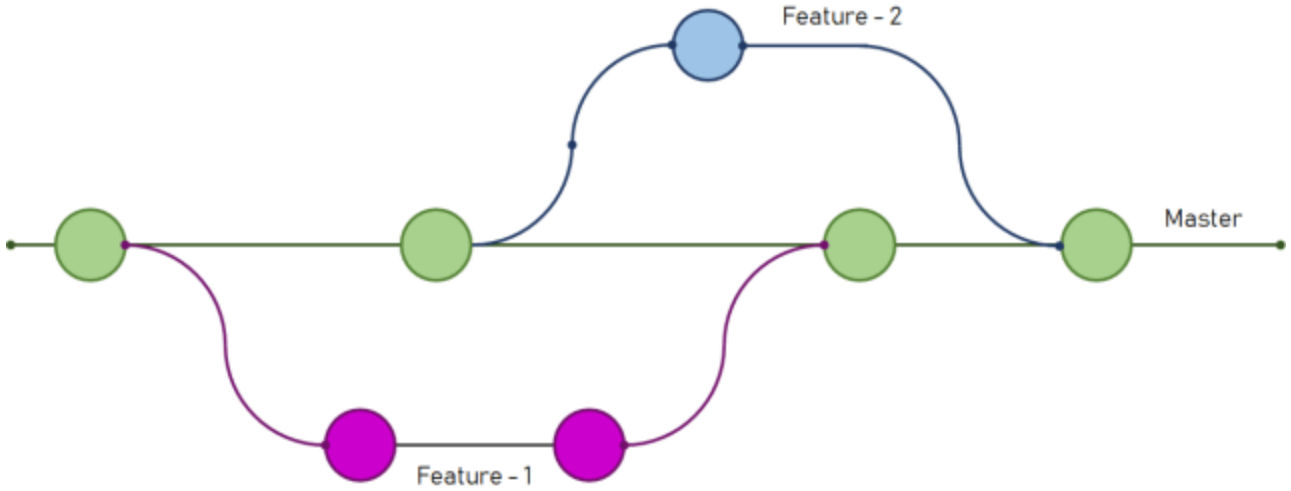
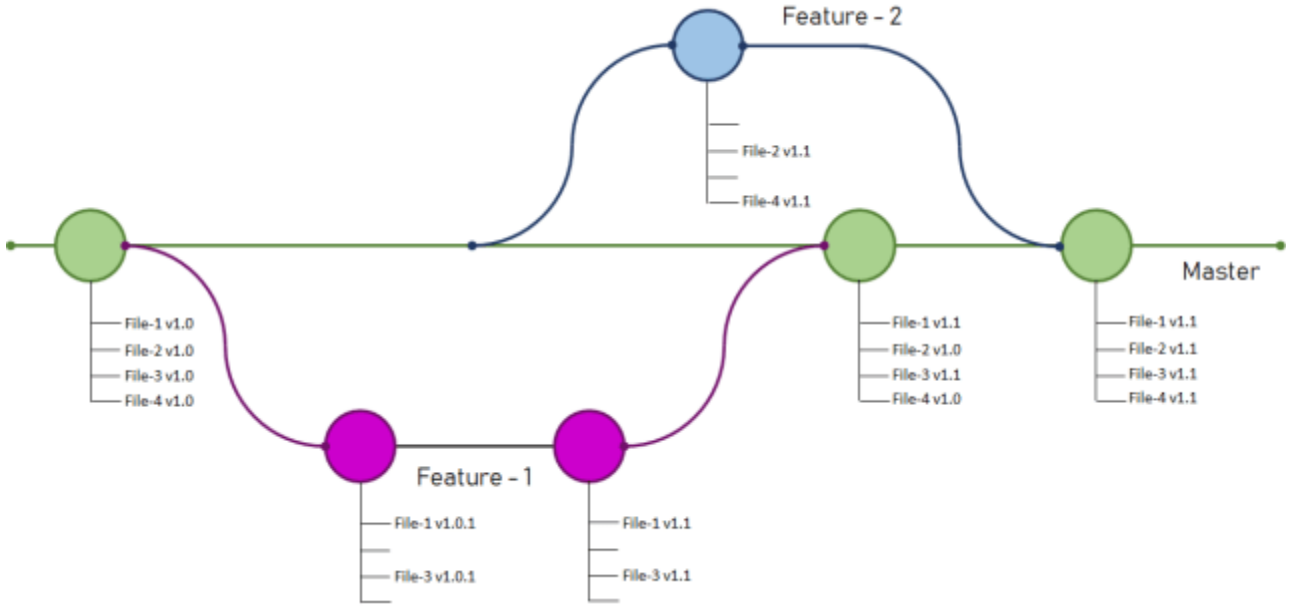
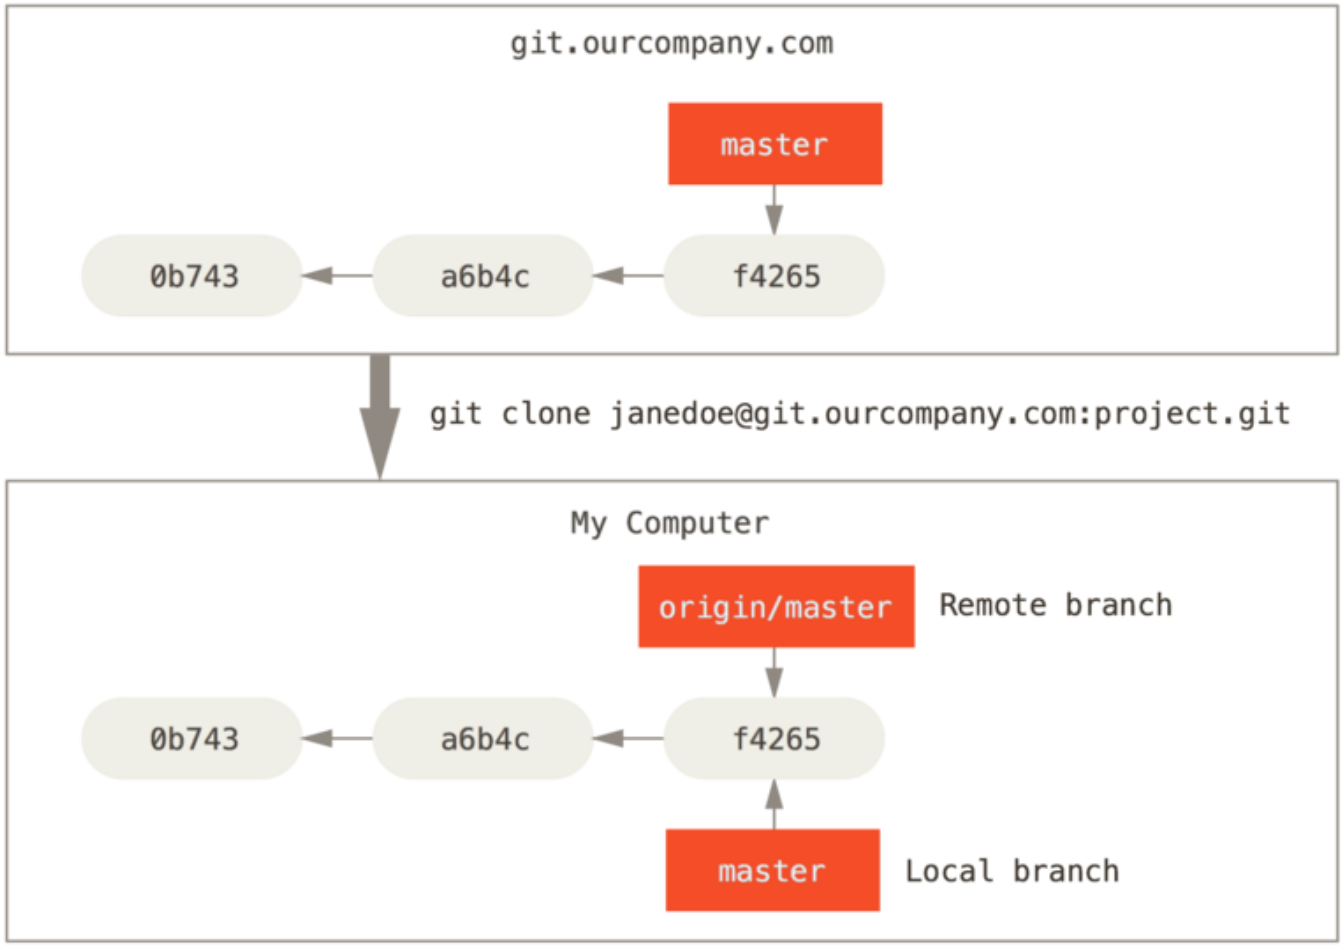
git feature branch



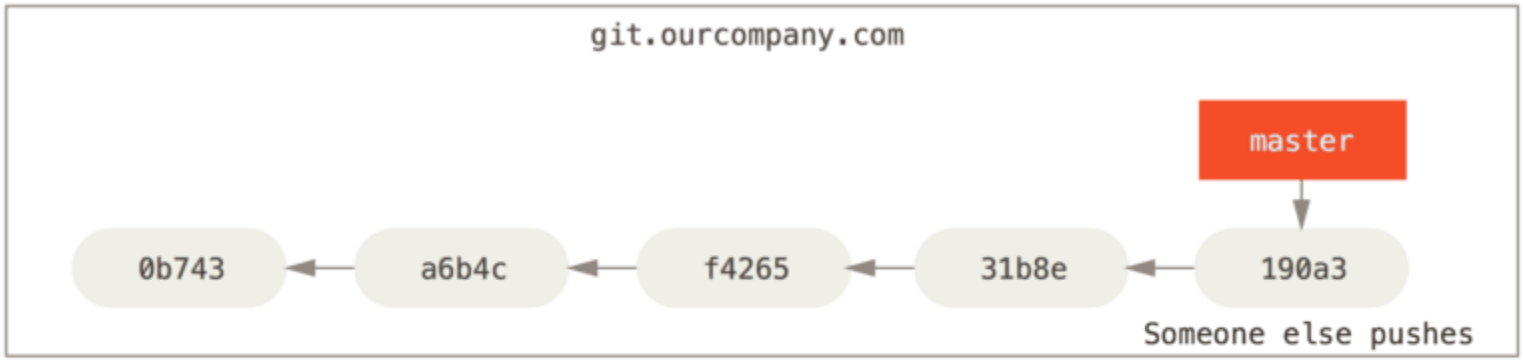
git feature branch



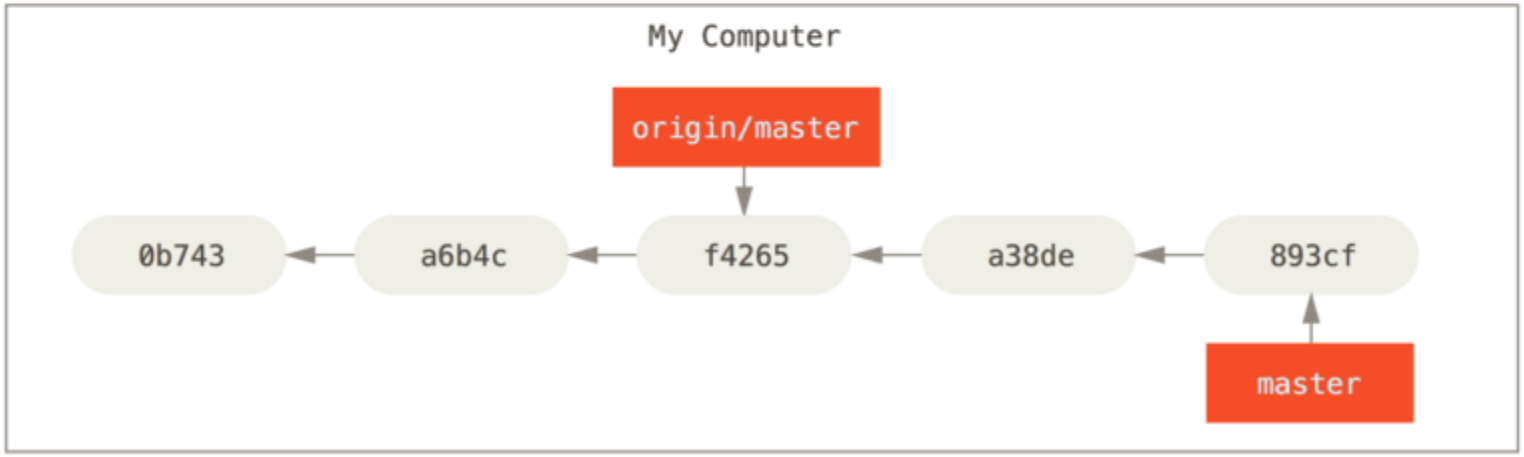
git remote branch



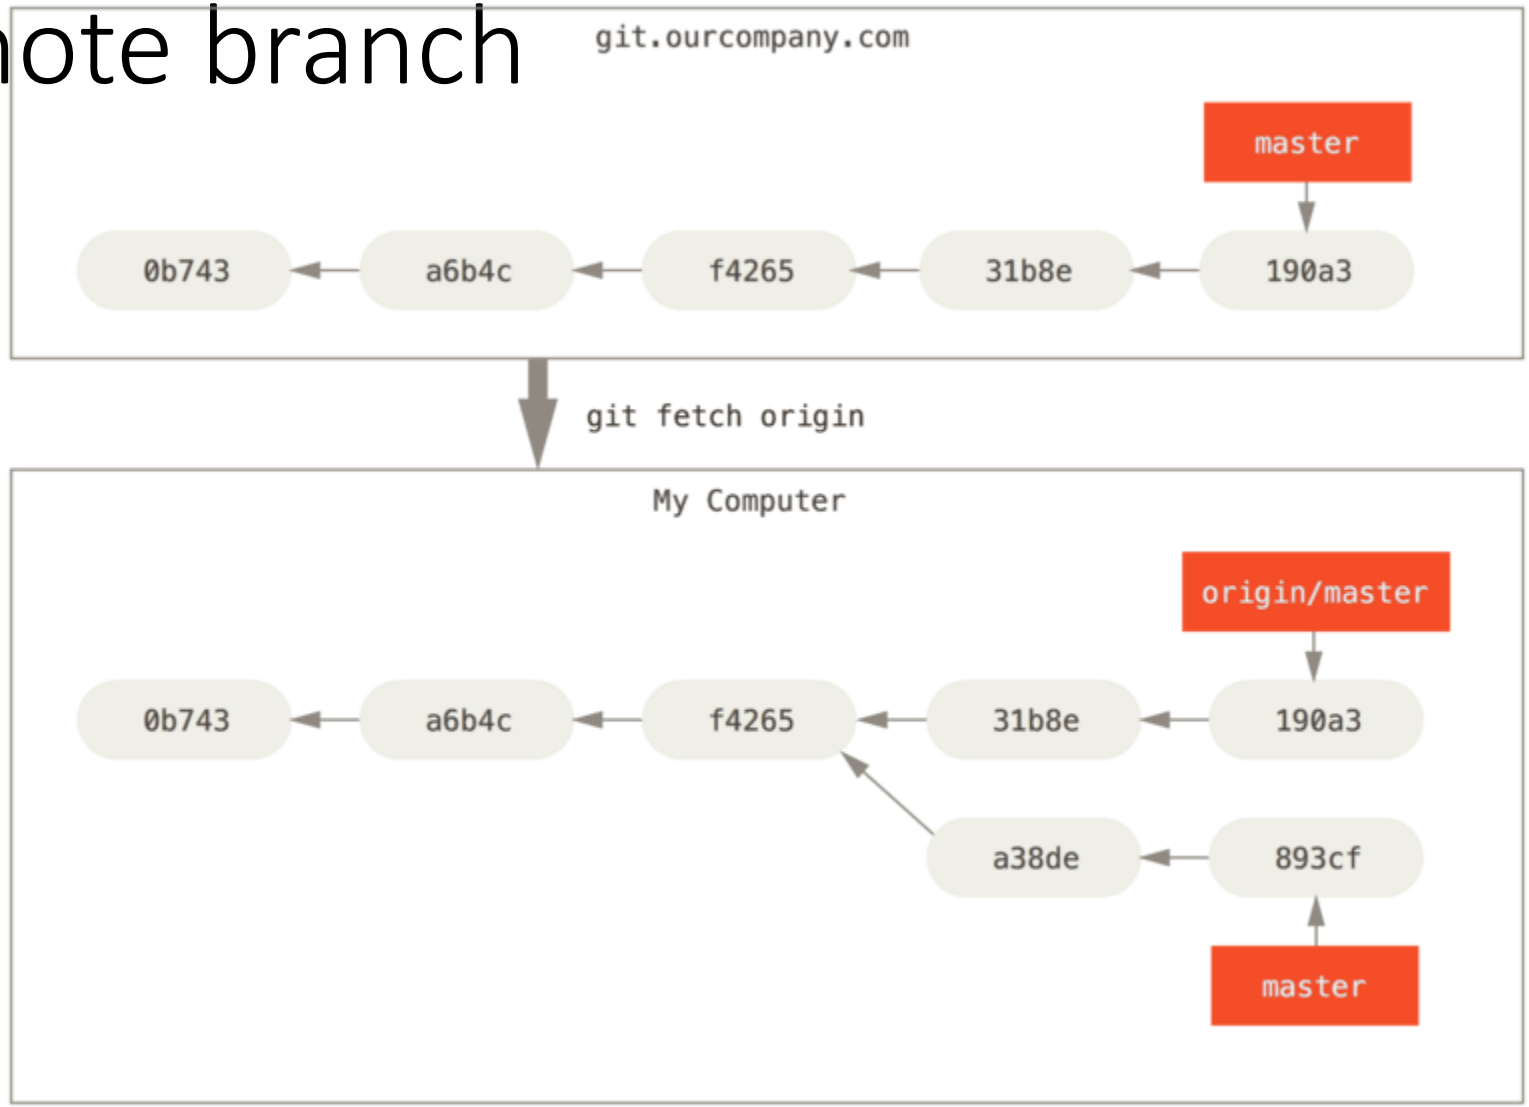
git remote branch



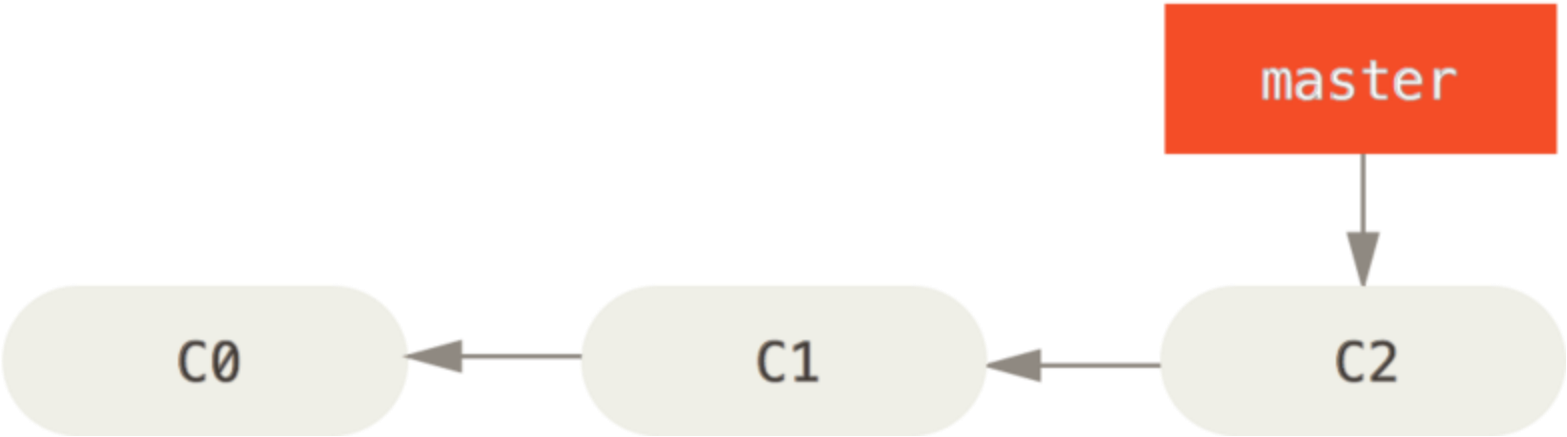
git fetch vs git pull



git remote branch

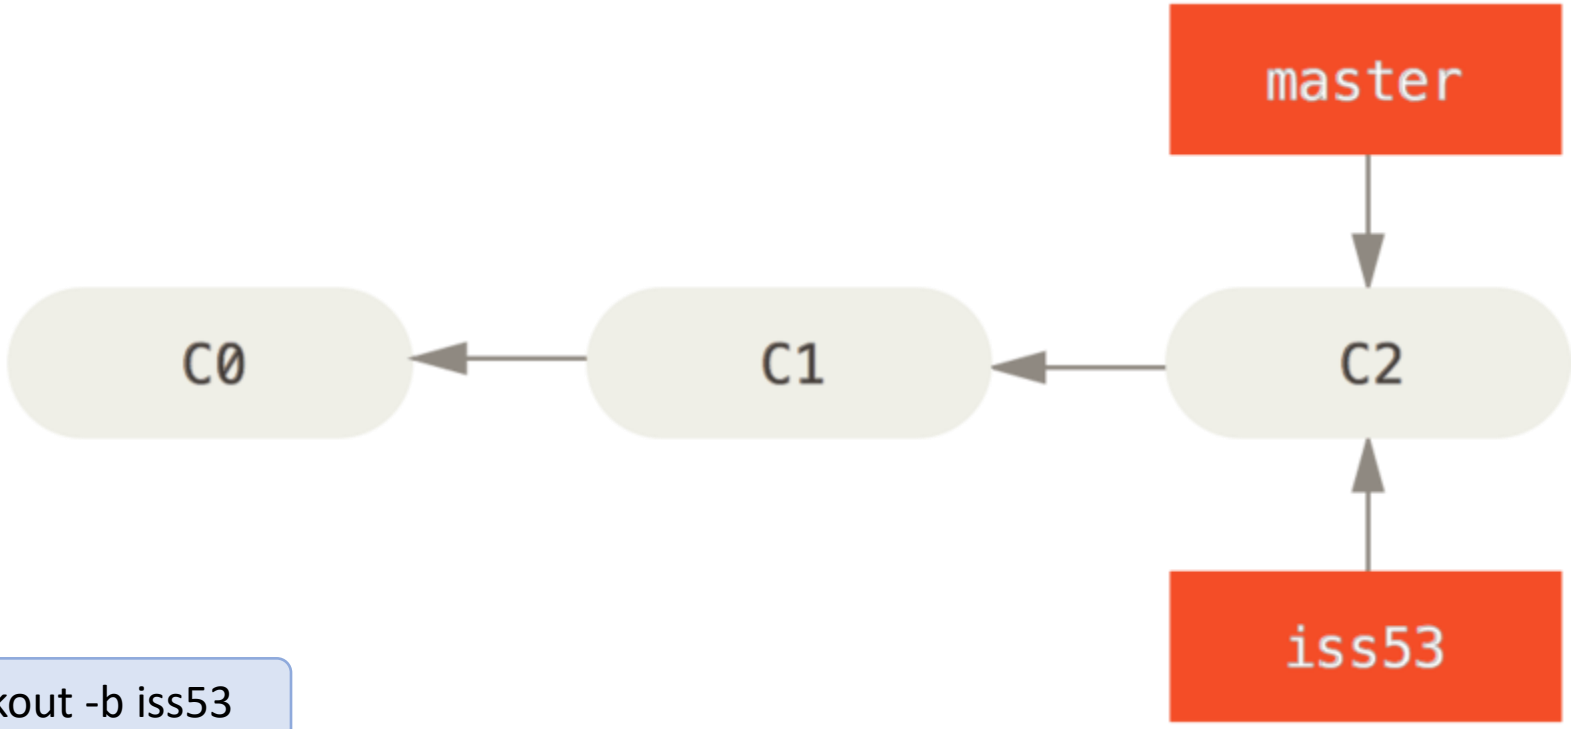


git branching



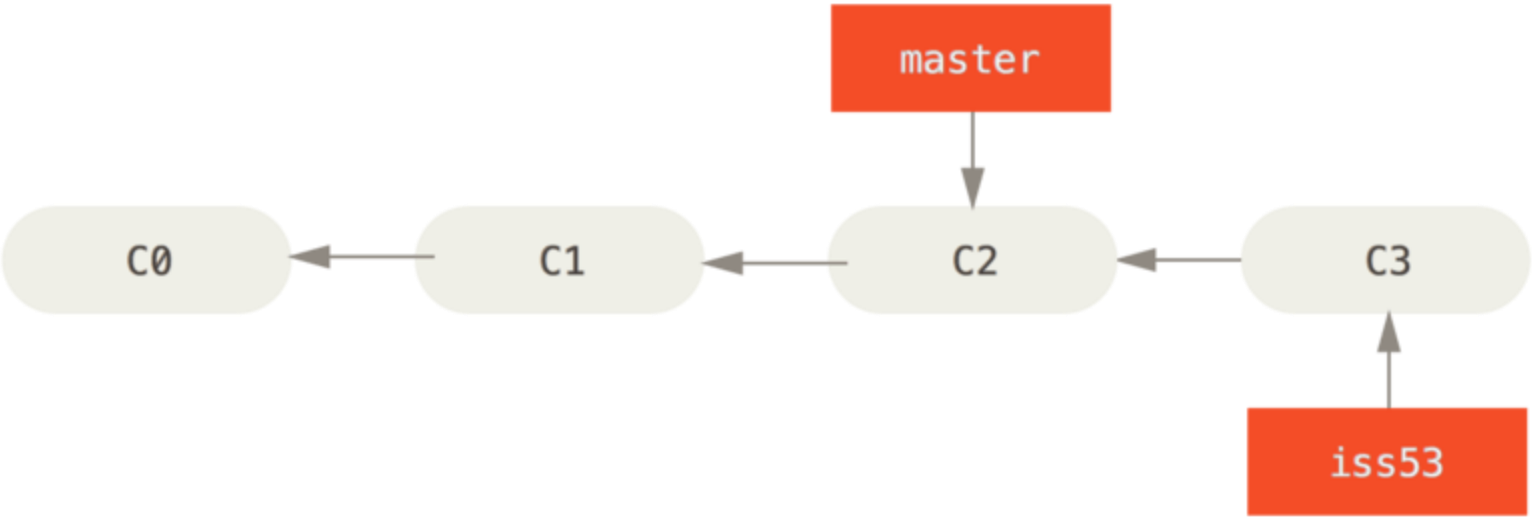
git checkout master

git branching



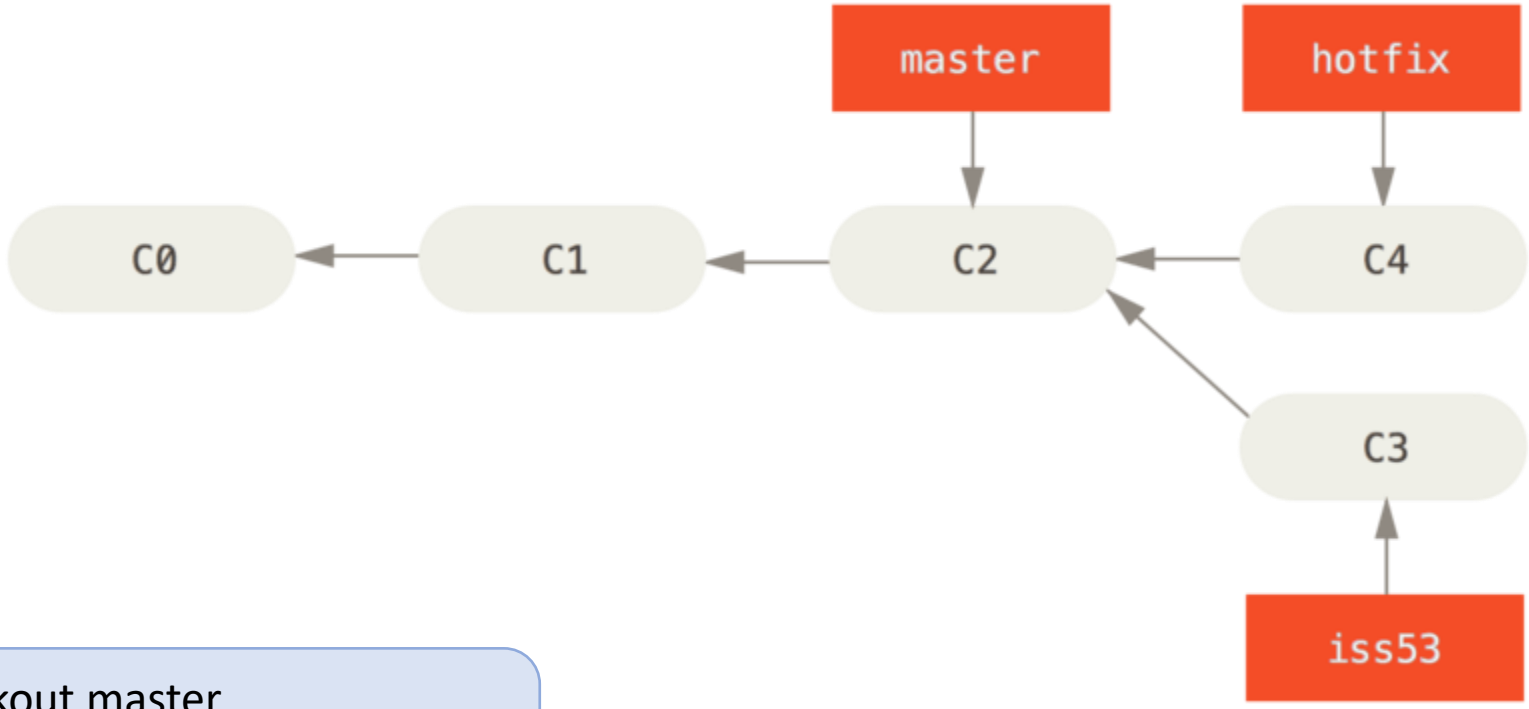
```
git checkout -b iss53
```

git branching



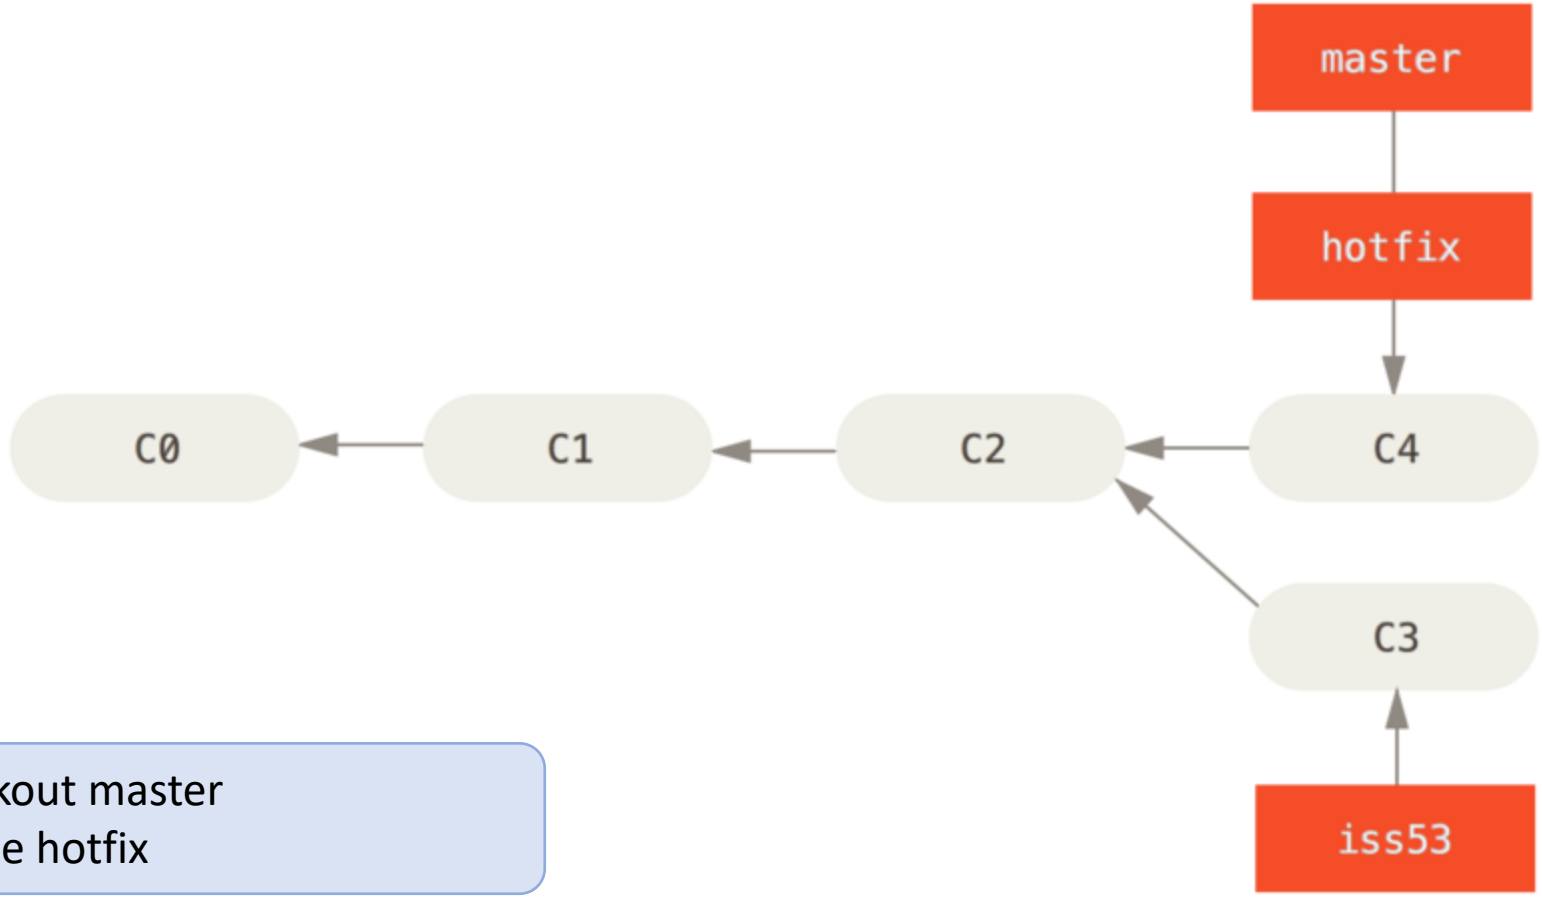
```
git commit -a -m 'Moja zmiana'
```

git branching



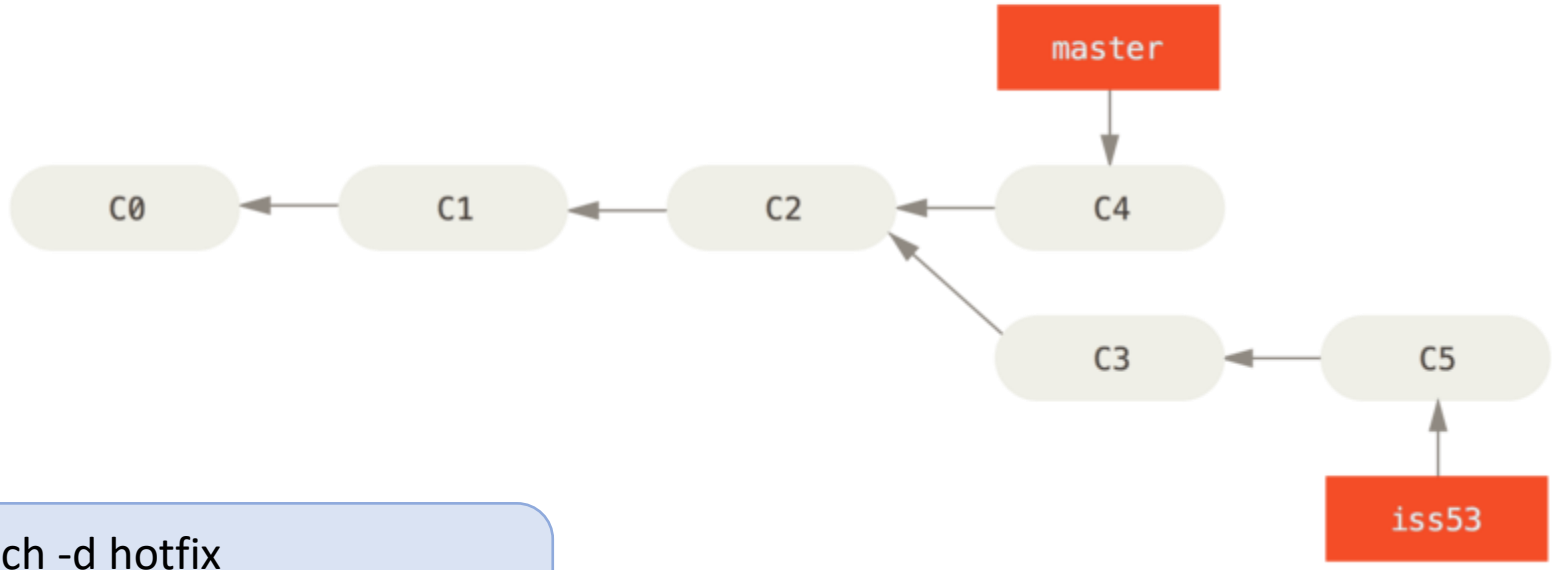
```
git checkout master
git checkout -b hotfix
git commit -a -m 'Poprawka'
```

git branching



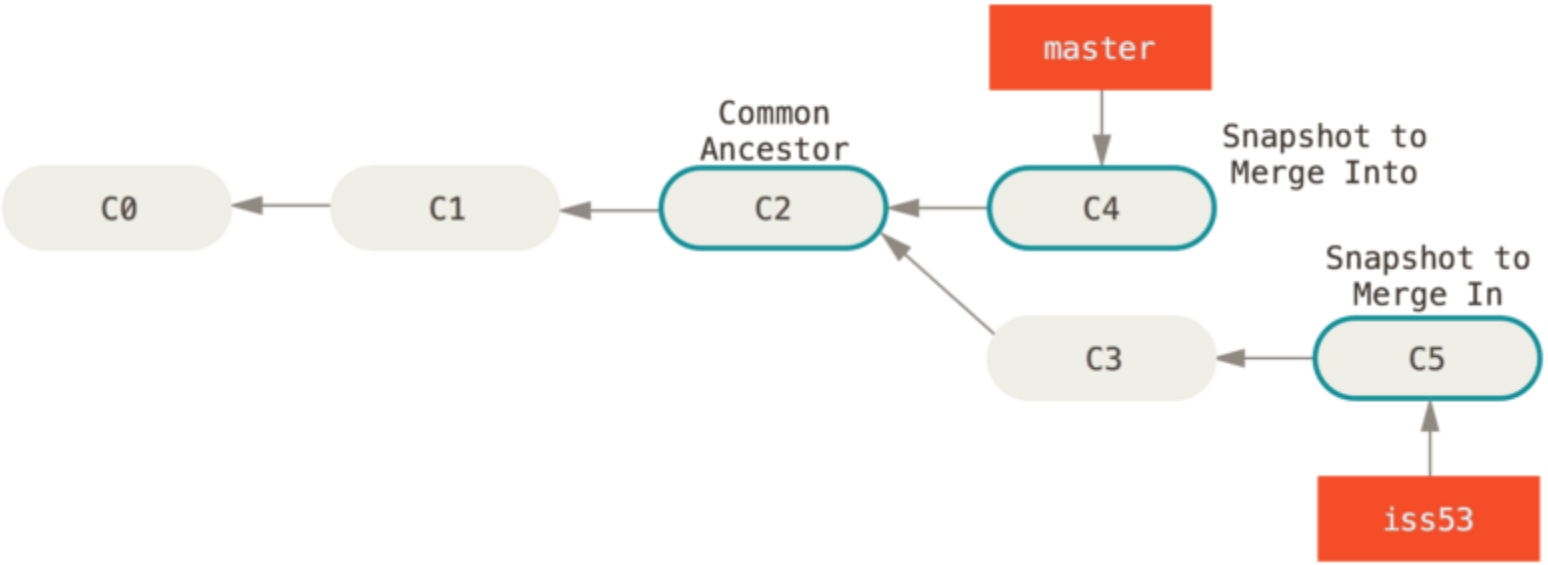
```
git checkout master
git merge hotfix
```

git branching

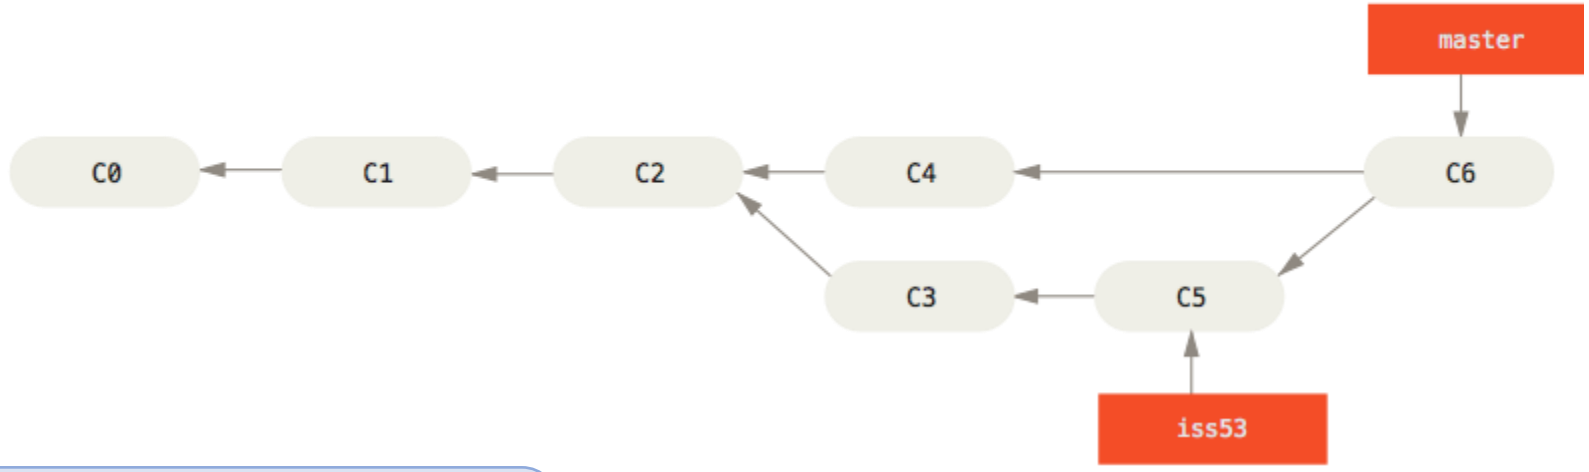


```
git branch -d hotfix
git checkout iss53
git commit -a -m 'Moj nowy ficzer'
```

basic merging

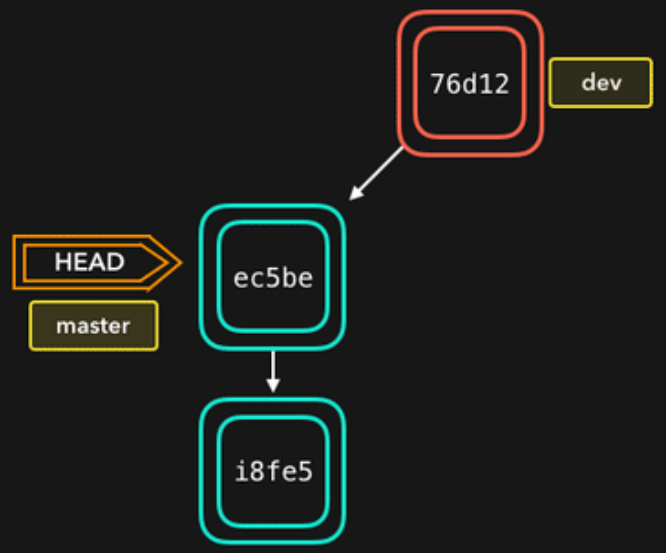


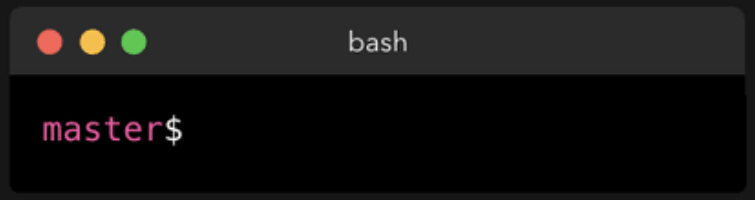
basic merging



```
git checkout master
git merge iss53
git branch -d iss53
```

git merge fast-forward (--ff)



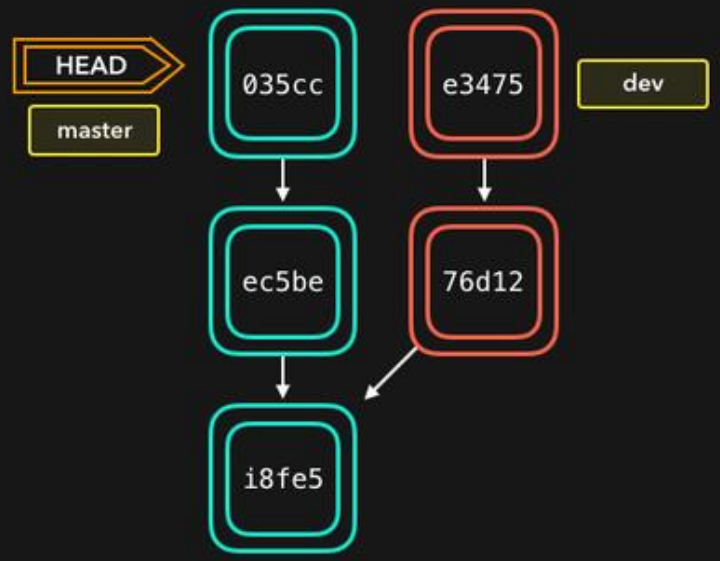


Git | Merging (fast-forward)

Default behavior when the merging branch has all of the current branch's commits

Doesn't create a new commit, thus doesn't modify existing branches

git merge no-fast-foward (--no-ff)



bash

```
master$
```

Git | Merging (no-fast-forward)

Default behavior when current branch contains commits that the merging branch doesn't have

Creates a new commit which merges two branches together without modifying existing branches

git merge conflicts

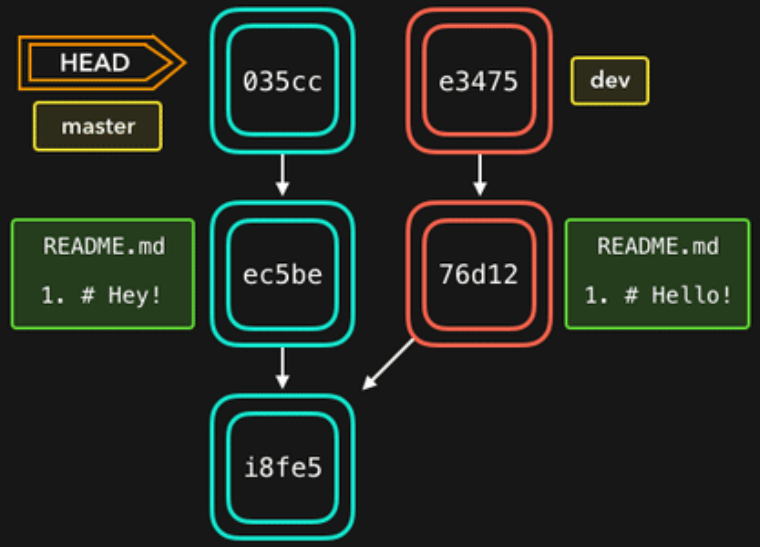
master

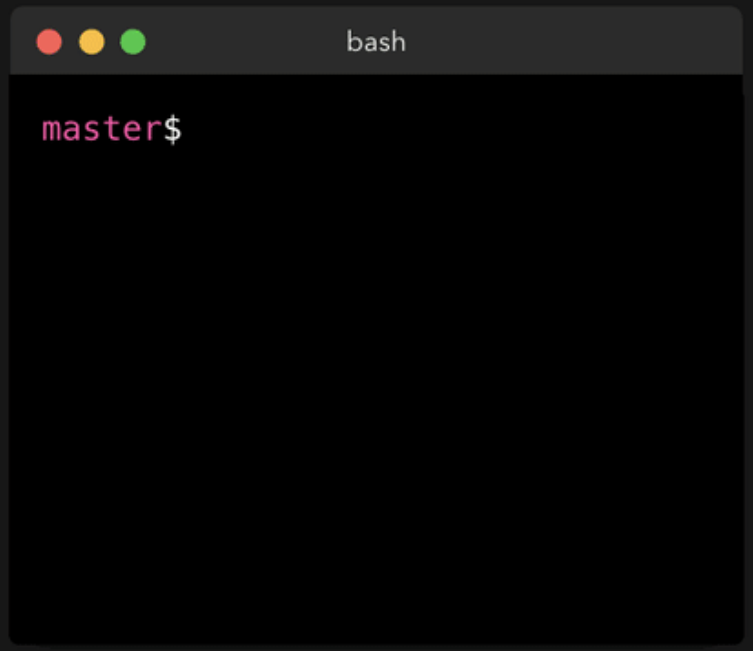
```
1 # Hey!
2
3 Welcome to the README of
4 this amazing project
```

dev

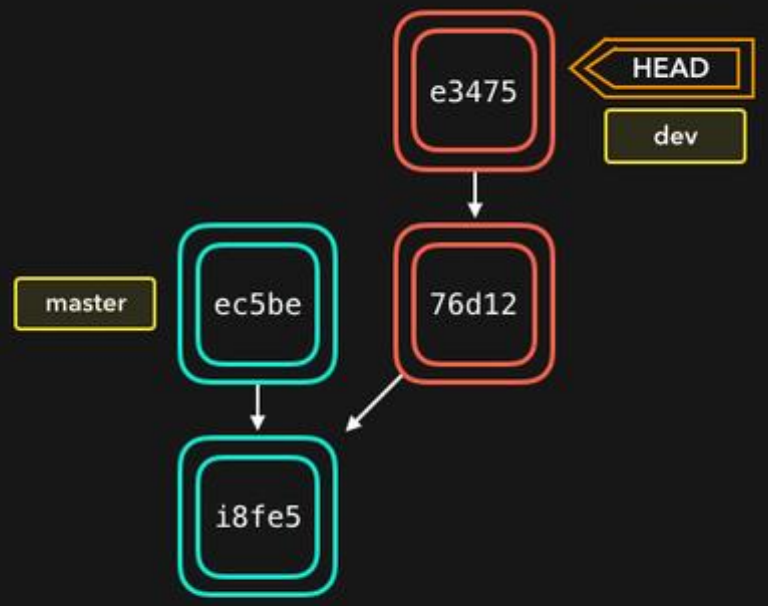
```
1 # Hello!
2
3 Welcome to the README of
4 this amazing project
```

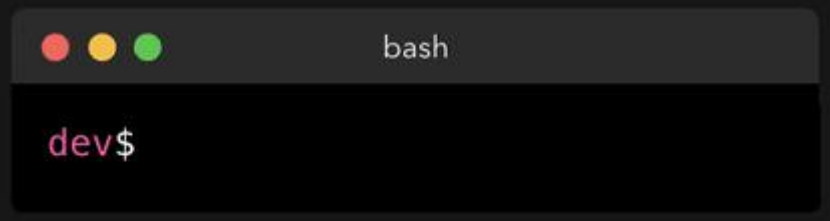
git merge conflicts





git rebase





Git | Rebasing

Copies commits on top of another branch without creating a commit, which keeps a linear history

Changes the history as new hashes are created for the copied commits
